IN THE MATTER OF THE APPLICATION  
OF THE UNITED STATES OF AMERICA  
FOR AN ORDER AUTHORIZING THE  
INSTALLATION AND USE OF A PEN REGISTER  
AND TRAP AND TRACE DEVICE  
- - - - - X

SEALED APPLICATION

APPLICATION

Michael Yaeger, an Assistant United States Attorney for the Eastern District of New York, respectfully submits under seal this ex parte application for an order pursuant to 18 U.S.C §§ 3122 and 3123, authorizing the installation and use of a pen register and trap and trace device for a period of 60 days from the date of this order to identify the Internet Protocol ("IP") addresses communicating with the server identified by IP address 173.193.227.76 whose listed subscriber is Roman Semenchuk (the "SUBJECT SERVER"), located at SoftLayer Technologies, Inc. (the "Service Provider"), at 2849 Alpha Road Dallas, TX 75244, along with the date and time of such communications.

In support of this application, I state the following:

1. I am an Assistant United States Attorney in the Office of Loretta E. Lynch, United States Attorney for the Eastern District of New York. As such, I am an "attorney for the Government" as defined in Rule 1(b)(1) of the Federal Rules of Criminal Procedure, and therefore, pursuant to 18 U.S.C. § 3122,

2. The Court has authority to order the installation and use of a pen register or a trap and trace device anywhere in the United States if the Court finds that the attorney for the government has certified to the Court that the information likely to be obtained by such installation and use is relevant to an ongoing criminal investigation. 18 U.S.C. §§ 3122 and 3123. As the United States Court of Appeals for the Second Circuit has explained, an application for a pen register or trap and trace device

need only identify the applicant and the investigating law enforcement agency and certify that "the information likely to be obtained is relevant to an ongoing criminal investigation being conducted by that agency." 18 U.S.C. § 3122(b)(2). The provision was not intended to require independent judicial review of relevance; rather, the reviewing court need only verify the completeness of the certification.

In re United States, 10 F.3d 931, 935 (2d Cir. 1993) (emphasis added); accord In re Applications, 515 F. Supp. 2d 325, 329 (E.D.N.Y. 2007) (explaining "minimal requirement" of Section 3122(b)).

3. Based on information provided to me by a special agent of the Federal Bureau of Investigation (the "investigative agency"), I hereby certify that the investigative agency is conducting an ongoing criminal investigation into possible violations of federal criminal laws, including a

criminal intrusion into potential computers via the internet in violation of 18 U.S.C. § 1030 by unknown individuals, and that the information likely to be obtained from a pen register and trap and trace device on the SUBJECT SERVER is relevant to that investigation.

ADDITIONAL INFORMATION

4. A pen register, as defined in Title 18, United States Code, Section 3127, is "a device or process which records or decodes dialing, routing, addressing, or signaling information transmitted by an instrument or facility from which a wire or electronic communication is transmitted." A trap and trace device is defined as "a device or process which captures the incoming electronic or other impulses which identify the originating number or other dialing, routing, addressing, and signaling information reasonably likely to identify the source of a wire or electronic communication."

5. In the traditional telephone context, pen registers captured the destination phone numbers of outgoing calls, while trap and trace devices captured the phone numbers of incoming calls. Similar principles apply to other kinds of wire and electronic communications, as described below.

6. The Internet is a global network of computers and other devices. Every device on the Internet is identified by a unique number called an Internet Protocol, or "IP" address.

This number is used to route information between devices. Two computers must know each other's IP addresses to exchange even the smallest amount of information. Accordingly, when one computer requests information from a second computer, the requesting computer specifies its own IP address so that the responding computer knows where to send its response. These IP addresses are, in the computer network context, conceptually identical to the origination phone numbers captured by traditional trap and trace devices installed on telephone lines.

7. A network is two or more computers or other devices connected to each other that can exchange information with each other via some transmission method, such as by wires, cables, or radio waves. The equipment that connects a computer or other device to the network is commonly referred to as a network adapter. Most network adapters have a Media Access Control ("MAC") address assigned by the manufacturer of the adapter that is designed to be a unique identifying number. An adapter's unique MAC address allows for proper routing of communications on a local area network and may be used for other purposes, such as authentication of customers by some network service providers. Unlike a device's IP address that often changes each time a device connects to the Internet, a MAC address is fixed at the time of manufacture of the adapter. Because the address does not change and is intended to be unique,

a MAC address can allow law enforcement to identify whether communications sent or received at different times are associated with the same adapter.

8. On the Internet, data transferred between devices is not sent as a continuous stream, but rather it is split into discrete packets. Generally, a single communication is sent as a series of packets. When the packets reach their destination, the receiving device reassembles them into the complete communication. Each packet has two parts: a "packet header" with routing and control information, and a payload, which generally contains user data. The packet header contains non-content information such as the packet's source and destination IP addresses and the size of the packet.

9. The packet header also contains a "port number assignment," which is a numeric identifier that specifies which applications are being used to send and receive data. For example, Port 80 is typically reserved for World Wide Web traffic, so that a computer that wishes to retrieve information from a web server would typically connect to Port 80. Thus, the packet header information collected by a pen register and trap and trace device contains no content and therefore constitutes "routing, addressing and signaling" information within the meaning of the statute, as amended in October 2001. As with traditional telephonic pen registers and trap and trace devices,

it is feasible to use a combination of hardware and software to ascertain the source and destination addresses associated with the data transmission without collecting the content.

RELIEF REQUESTED

10. Based upon the above certification, the government requests that the Court issue an Order, pursuant to 18 U.S.C. §§ 3122 and 3123, that authorizes the installation and use of a pen register to record the dialing, routing, addressing, and signaling information associated with communications sent to or from the SUBJECT SERVER, along with the date and time of such communications, for a period of 60 days.

11. Specifically, the pen register sought by this application will be installed at location(s) to be determined, and will collect dialing, routing, addressing, and signaling information associated with each communication to or from the SUBJECT SERVER, including, but not limited to, the date, time, and duration of the communication, and the following, without geographic limit: IP addresses, MAC addresses, port numbers, and packet headers.

12. The government further requests that the Court direct the Service Provider, and any other person or entity providing wire or electronic communication service in the United States whose assistance is used to facilitate execution of the Order, to notify special agents of the investigative agency, upon

oral or written request, of any and all changes (including additions, deletions, and transfers) in service regarding the SUBJECT SERVER, including IP addresses and subscriber information associated with these service changes.

13. The government further requests that, pursuant to 18 U.S.C. § 3123(a)(1) and (b)(2), the Court direct that, upon service of the Order upon them, the Service Provider and any other person or entity providing wire or electronic communication service in the United States whose assistance may facilitate execution of the Order furnish the information, facilities, and technical assistance necessary to accomplish unobtrusively the installation and use of the pen register and trap and trace device with compensation to be paid by the investigative agency for reasonable expenses directly incurred in providing such facilities and assistance.

14. The government further requests that the Order direct the Service Provider, and any other person or entity providing wire or electronic communication service in the United States whose assistance is used to facilitate execution of the Order, to furnish the results of the pen register and trap and trace device installations to special agents of the investigative agency as soon as practicable, and on a continuing basis, 24 hours a day for the duration of the Order.

15. Finally, pursuant to 18 U.S.C. §§ 3123(d) and 2705(b), the government also requests that the Service Provider, and any other person or entity whose assistance is used to facilitate execution of the Order be ordered not to disclose in any manner, directly or indirectly, by any action or inaction, the existence of this application and Order, the resulting pen register, or this investigation, except as necessary to effectuate the Order, unless and until authorized by this Court. Any such disclosure might jeopardize this investigation because it would alert the target to the existence of an investigation and might lead to the destruction or concealment of evidence or the flight of subjects of investigation.

16. No prior request for the relief set forth herein has been made except to the extent set forth above. The foregoing is affirmed under the penalties of perjury. See 28 U.S.C. § 1746.

**12 MISC 300**

----- X  
IN THE MATTER OF THE APPLICATION  
OF THE UNITED STATES OF AMERICA  
FOR AN ORDER AUTHORIZING THE  
INSTALLATION AND USE OF A PEN REGISTER  
AND TRAP AND TRACE DEVICE  
----- X

SEALED ORDER

This matter comes before the Court pursuant to an application by Assistant United States Attorney <sup>MICHAEL YAEGER</sup> ~~[AUSA NAME]~~, an attorney for the Government as defined by Rule 1(b)(1) of the Federal Rules of Criminal Procedure and a duly-authorized representative of a "governmental entity" under 18 U.S.C. § 2703(c) and (d) requesting an Order pursuant to 18 U.S.C. §§ 3122 and 3123, authorizing for a period of 60 days the installation and use of a pen register and a trap and trace device to collect all non-content dialing, routing, addressing, and signaling information originating from or destined to the IP address 173.193.227.16, located at SoftLayer Technologies, Inc., at 2849 Alpha Road Dallas, TX 75244, including IP addresses, MAC addresses, port numbers, and packet headers, along with the date and time of such communications. UPON REVIEW OF THE APPLICATION, THE COURT HEREBY FINDS THAT:

J.J.  
5/4/12

Pursuant to 18 U.S.C. § 3123, Applicant has certified that the information likely to be obtained by use of a pen register and a trap and trace device is relevant to an ongoing criminal investigation being conducted by the Federal Bureau of

Investigation("investigating agency") into possible violations of Title 18, United States Code, Section 1030.

IT IS HEREBY ORDERED, pursuant to 18 U.S.C. § 3123, that special agents of the investigative agency may install, or cause to be installed, and use a pen register to record and collect all non-content dialing, routing, addressing, and signaling information originating from or destined to the IP address 173.193.227.16, located at SoftLayer Technologies, Inc., (the "Service Provider"), at 2849 Alpha Road Dallas, TX 75244, , including IP addresses, MAC addresses, port numbers, and packet headers, along with the date and time of such communications;

IT IS FURTHER ORDERED, pursuant to Title 18, United States Code, Section 3123(c)(1), that the use and installation of the foregoing occur for a period not to exceed 60 days;

IT IS FURTHER ORDERED, pursuant to Title 18, United States Code, Section 3123(b)(2) and in accordance with the provisions of section 3124(b), that Service Provider, upon service of the order upon it, shall furnish information, facilities, and technical assistance necessary to accomplish the installation of the pen register and trap and trace devices, including installation and operation of the devices unobtrusively and with a minimum of disruption of normal service;

IT IS FURTHER ORDERED that the Service Provider furnish the results of the pen register and trap and trace device

installations to special agents of the investigative agency as soon as practicable, and on a continuing basis, 24 hours a day for the duration of the Order;

IT IS FURTHER ORDERED that the Service Provider and any other person or entity whose assistance is used to facilitate this Order be compensated by the investigative agency for reasonable expenses directly incurred in providing such assistance.

Good cause having been shown, IT IS FURTHER ORDERED, pursuant to 18 U.S.C. §§ 3123(d) and 2705(b), that this Order and the application be sealed until otherwise ordered by the Court, and that the Service Provider, its representatives, agents and employees, and any other person or entity involved in facilitating this Order shall not disclose in any manner, directly or indirectly, by any action or inaction, the existence of this application and Order, the resulting pen register, or this investigation, except as necessary to effectuate the Order, unless and until authorized by this Court.

Dated: Brooklyn, New York  
May 4, 2012
